

Twig undertook the landscaping of the Thanet Earth site and have transformed it to an environment to support an array of flora and fauna.

The contract involved the planting of 15,000 trees and shrubs and the seeding of calcareous and amenity grass across the site.

The site is maintained by Twig to ensure successful establishment of the grass and shrubs and we are working with them to encourage butterflies and other animals into the area.

Chris Whitehead-Collett, Operations Manager of Thanet Earth Marketing says:

"Twig's proactive approach and level of coordination undertaking this project has given me total confidence in their ability to continue to maintain the site here at Thanet Earth."
